To Whom It May Concern:

RE: Cooling Tower Contractors, Ben Dennis

CTC were engaged on the Tamar Valley Power Station project for approx 12 months where the company was contracted to manage and construct the 6 cell FRP Hybrid Cooling Tower.

Under the management of Ben Dennis, CTC's application to their duties while on this project was excellent. They undertook all task in a timely manner and have the ability to independently resolve difficulties as they arise.

Ben has shown good leadership qualities with the ability to assign tasks to other crew member's to achieve goals either set by him or management. I am confident in saying the set schedule for the works CTC was assigned to would not have been achieved within the tasks time frame without these qualities.

I consider Ben Dennis and the CTC work force to be valuable employees and would recommend them to any future employer.

I will be pleased to offer further comment if contacted.

Regards,

Andrew Crothers
